

JOHN D.'S BESIEGERS—CHIEF AND STAFF

Alexander Berkman, leader of I. W. W. surrounding John D. Rockefeller's estates at Tarrytown, N. Y., and his chief aides. At his left is Mary Yuster. The other woman is Helen Harris.

LOOKS SIMPLE, BUT JUST TRY IT

They didn't teach you this one in the "little red schoolhouse," and you may have slipped through Yale or Harvard without having found the answer to a like "sum in arithmetic," but it's never too late to learn, so why not have a try at it?

It's not a "catch"—it's a bona fide problem in mathematics, and a very

good test of your reasoning powers. College professors have been known to "fall down" on it, and even the old-timers who cut their teeth on mental 'rithmetic sometimes flunk on the simple question—

If a third of six were three,

What would a fourth of twenty be?

You can figure it out on paper, or in your head, but when you get the right answer it will be $7\frac{1}{2}$.
